

Software Solution for Movie Studio Management

Overview of a modular cloud native software solution.

Introduction

Managing a movie studio involves complex workflows—from production planning and asset tracking to HR and access control. To streamline these operations, we've designed a modular, cloud-native solution built on SAP CAP best practices.

This solution ensures clear separation of concerns, offering dedicated modules for core functions while meeting critical non-functional requirements like multi-language support, mobile accessibility, and role-based security.

In this presentation, we'll explore how our architecture delivers flexibility, scalability, and efficiency for modern studio management.

01

Software Solution Overview

Modular, Cloud-Native Architecture

Our solution follows SAP CAP's separation of concerns, with independent modules for core functions, ensuring scalability and maintainability.

Core Modules:

- Movies
- Assets
- HR
- Admin/Config

Cross-Cutting Features:

- RBAC
- I18n
- Cloud-Native Deployment

Key Functional Modules

Movie Management - Add/edit movies, metadata, and production timelines.

Asset Tracking - Digital/physical asset lifecycle (scripts, props, contracts).

HR & Crew Management - Staff roles, schedules, payroll integration.

Admin & Configuration - studio-wide settings.

Built for Flexibility & Security

i18n: UI/UX supports multiple languages for global studios.

RBAC: Fine-grained permissions (e.g., "Editor", "Finance", "Director", "Admin" etc.).

Mobile-Friendly: Responsive design for on-set access.

Cloud-Native

Fits Your Studio's Ecosystem

Pre-built connectors for:

- SAP S/4HANA (finance, procurement)
- Adobe Suite (asset collaboration)
- Azure AD (RBAC sync)

Possible connectors:

- Artists DB
 - Casting agencies
 - Content distributors
 - Assets leasing companies
- 

Best Practices of SAP CAP Guidelines

Our solution adheres to SAP Cloud Application Programming (CAP) guidelines, ensuring scalability, robustness, and ease of use. By following these best practices, we can create an intuitive and professional environment that streamlines processes and enhances user experience across all modules.

02

Functional Requirements

Adding/Modifying Movies

The application allows users to effortlessly add or modify movie entries. It supports inputting essential details such as title, genre, cast, and production notes, ensuring accurate database management. The intuitive interface also enables easy updates to existing movie information, promoting data integrity and effective resource management.

Asset Management

The asset management module provides comprehensive tools for tracking and organizing all studio assets, including props, costumes, and equipment. Users can easily categorize assets, and manage inventory, ensuring efficient resource allocation.

For next release it's planned to enhance module by facilitating quick searches and reports, track usage frequency improving decision-making regarding asset utilization.

Human Resource Management

The human resource management module is designed to streamline staffing processes. It supports functionalities such as recruitment tracking, employee onboarding, and scheduling.

03

Non-Functional Requirements

Internationalization (i18n)

The software solution incorporates internationalization features, enabling support for multiple languages and localization options. This ensures that users from different regions can operate the application comfortably. By accommodating various languages and cultural formats, we enhance user accessibility and broaden the software's market potential.

Currently solution is translated into:

- English
- Russian
- Spanish

Mobile-Friendly Design

A mobile-friendly design ensures that users can access the application seamlessly across all devices. The responsive interface adapts to different screen sizes, allowing for effective use on smartphones and tablets. This feature enhances user engagement and accessibility, making workflow flexible and efficient in various environments.

Role-Based Access Control (RBAC)

The RBAC module allows for precise control over user permissions and access levels within the system. Assigning roles ensures that users have access to only those features and data necessary for their responsibilities. This enhances security and compliance, protecting sensitive information while maintaining operational effectiveness.

Cloud-Native Architecture

The cloud-native architecture enables scalability and high availability for the software solution. By leveraging cloud technologies, we ensure that resources can easily adjust to varying workloads. This architecture supports continuous deployment and integration, facilitating rapid updates and enhancing the overall system resilience.

Conclusions

The software solution for managing a movie studio is designed around the principles of modularity, scalability, and best practices. By addressing both functional and non-functional requirements, this solution meets the diverse needs of modern studios, enhancing efficiency in managing movies, assets, and human resources while ensuring a secure, user-friendly experience.

Thank you!
